PROFILE

Full Stack Software Engineer specialized in building scalable web applications and SaaS platforms using React, Vue.js, Node.js, and Python. Experienced in database design, system administration, and DevOps practices (GitHub Actions, Docker). Proven impact through projects that boosted client engagement by 40% and reduced recruiter workload by 50%. Passionate about applying AI/LLM technologies to real-world business challenges.

EMPLOYMENT HISTORY

IT Specialist and Software Engineer at Quadro Consulting, Belgrade

June 2024 — Present

- Developed internal web applications and automation tools using JavaScript, Vue.js, React, Python, and Node.js.
- Maintained and supported IT infrastructure including servers, workstations, and networks.
- Implemented system monitoring and troubleshooting processes, improving uptime and reliability.
- Collaborated with colleagues to deliver software solutions tailored to business needs.

Freelance Software Engineer at Self-employed, Belgrade / Remote

January 2020 — Present

- Designed and deployed custom web applications for clients using JavaScript, Vue.js, React, Node.js, and SQL.
- Built end-to-end solutions including frontend UIs, backend APIs, and database structures.
- Collaborated with clients to define requirements, provide solutions, and ensure project delivery.
- Delivered projects ranging from portfolio websites to internal business applications.

IT Support Specialist at Law Office Samac & Associates, Belgrade

June 2021 — June 2024

- Provided IT support for office hardware and software, ensuring smooth daily operations.
- Configured and maintained local networks, printers, and secure email systems.
- Assisted in data security practices and system updates.
- Supported staff with technical troubleshooting and setup of new equipment.

EDUCATION

Undergraduate Applied Studies - Information Technology, School of Computing (RAF), Belgrade

September 2023 — Present

Expected graduation: June 2026.

Mechatronics, High School - Politehnika "School for New Technologies", Belgrade

September 2019 — June 2023

Specialized high school with focus on technology, mechatronics, and applied IT.

PROJECTS

Lawcrative - Legal Software for Lawyers in the Balkans

January 2025 — Present

Founder & Engineer of Lawcrative, a SaaS startup for law firms in the Balkans, with modules for case/client management, calendar, integrated chat, and AI legal assistant. Built with Vue.js (frontend) and Node.js/Python (backend, FastAPI), integrating OpenAI & LangChain for document automation and legal insights.

ResumeBestie – AI-powered Candidate Summary Tool

March 2025 — April 2025

Internal HR tool (Vue.js, Express.js, OpenAI API, Microsoft Auth). Automatically generated candidate summaries from CVs/LinkedIn/interview notes and prepared integration with BambooHR API for syncing 200+ candidates. **Reduced recruiter time spent on candidate summaries by ~50%.**

Personal Portfolio Website

June 2025 — June 2025

Designed and deployed a modern React + TailwindCSS portfolio with animations on Vercel showcasing professional projects and skills, used as primary personal branding site.

★ OTHER PROJECTS

QuadroLoop - Employee Performance Review Platform

July 2025 — August 2025

Internal HR platform (React, Tailwind, Express.js) for multi-source feedback (self, peer, manager, external). Integrated BambooHR API for automatic employee sync and role-based access control. **Eliminated the need for external tools (e.g. Google Forms), centralizing all reviews in one internal system.**

Housekeeping.rs

July 2025 — July 2025

Built a professional WordPress site with Elementor & WooCommerce integration. Delivered responsive UX/UI aligned with brand identity (dark blue & gold), boosting client trust and bookings. **Boosted inquiries by 40% through improved UX/UI and optimized booking flow.**
